Dear Commissioners:I support XM radio content. I pay for the service. Satellite radio is a private-contracted commercial operation for the benefit of the public. I choose that source for information because it provides the variety and the content I want to hear. I want to hear traffic and weather information through this service. The National Assoc. of Broadcasters should not dictate this content and how the public receives it. I left their domain because of the poor content and service they provided. Now they want to recover what they lost because of poor management decisions by having you protect them. Don't do it! Let the market decide!

Sincerely,
M.S. Houk
